Cyber Insurance Policy for Small and Medium Sized Enterprises

Digitalization is a natural process but it also hides risks like data breach, data theft, destroying of your computer systems, cyber extortion, and many others.

Cyber crimes do not only happen to massive corporations, banks, and public institutions. Apparently, small and medium companies are often targeted as more vulnerable and oblivious to the threats in the digital space.

Even a business that consists of one person is in danger. In fact, as long as someone is using any type of a digital device, (PC, tablet, mobile) they can be affected. The harm caused by a cyber attack can be irreversible.

SMEs, especially if they are new on the market, focus their efforts mainly on succeeding, surviving in critical times, and establishing a recognizable brand. Because these objectives are a priority, too often security is neglected. As a result, smaller companies have become an easy and attractive target for hackers.

According to the Cost of Cybercrime Study conducted by the consultancy company Accenture, 43% of cyberattacks are aimed at small businesses, but only 14% are prepared to defend themselves.

Not only does a cyber attack disrupt normal operations, but it may damage important digital assets and the IT infrastructure that can be impossible to recover from without the budget or the resources to do so.

All these complications can be avoided by choosing the right cyber insurance policy. We are a next generation cyber insurance company that **combines the latest cybersecurity technology and expert insurance solutions** to provide you with **active security** and the peace of mind you need to expand in the digital world. With our solutions you are at ease!

What are the most common cyber threats?

- ➔ **Phishing** – you or your colleague can receive an email with harmful information.
- ➔ **Denial of Service** – your systems can be totally blocked.
- ➔ **Data Breach** – small and medium businesses that handle personal data/credit card data can be seriously affected.
- ➔ **Malware** – might damage your systems.

All of the mentioned above destructive activities might lead to an interruption of your business, significant financial losses, lawsuits, data theft and more. Not to mention the repercussions for your brand's reputation.

Who are the cyber criminals?

They can be insiders, competitors, disappointed clients, spies, and terrorists. Of course, they can be just cruel strangers trying to steal from your company. The most worrying factor is that anybody with bad intentions can become a hacker and compromise your data. No special skills or education are needed.

Is your IT structure reliable?

Usually, web administrators install an anti virus program to your systems but this is not enough to protect you. Hackers are clever and have various paths to reach you. They also use technologies your IT specialists have no access to. Having an IT department does not mean your company is not exposed to cyber attacks.

Your IT department or contractor is there to maintain and improve your information systems but will not deliver cybersecurity expertise to you and will not cover your expenses in case of an incident. Most likely, they do not have an emergency response plan for you as well.

How do we guarantee your peace of mind?

Our approach is to **prevent cyber attacks**. Therefore, we work side by side with Israeli top cybersecurity experts and we have an **in-house Security Operation Center (SOC)**. Our cyber insurance solution for SMEs includes an advanced EDR technology (**Managed Security Service**) for detection and response to suspicious activities.

In addition, our SOC is available 24/7 and reacts immediately in the event of a cyber threat or a cyber attack. Our experienced specialists will assist you and your partners within the agreed period of time and will ensure the harm to your systems and your reputation is kept to a minimum. If there's a serious damage, **we pay for the cost of repairing or replacing your office computer system**.

What is EDR? We implement a Managed Security Service (MSS) called Endpoint Detection and Response (EDR) which automatically recognizes, isolates, and neutralizes suspicious activities that happen in your network.

What are the advantages of your cyber insurance by Cyber Lev Ins?

Active Security

Your business is protected by a powerful risk mitigation tool – our in-house SOC.

Early Reaction

Unauthorized actions are detected by the EDR security service before they manage to harm your computer systems.

Immediate Response

You receive three levels of assistance via our 24/7 help-line.
