Cybersecurity for everyone

## Corporate Cyber Insurance

The world is operating online and digitalization is inevitable. We believe that you are riding the opportunities of your business with mastery. At the same time, are you completely alert and ready to defeat all the threats?

**Did you know?** 51% of individuals in the EU have experienced at least one type of cyber incident in the last 12 months, such as phishing, malware, or unauthorized access.

**What do you think is going to happen in the coming years?** Cyber crime is boom- ing and the total losses caused by cyber attacks globally will reach \$6 trillion (Cyber Crime Magazine). Unfortunately, there is still no vaccine against cyber threats.

The larger and more complex an organization is, the bigger the danger is. This is simply due to the fact that most of the security breaches are caused by a human error. Nine out of ten cyber incidents are a consequence of the actions or the lack of actions of the employees of a company.

Implementing the right insurance solution into your company's structures will guarantee you prevention of such errors because your network will be secured.

At Cyber Level Ins we approach your company individually and design for you a tailor-made cyber policy suiting your particular needs. We are constantly striving to raise cybersecurity awareness and provide proactive protection. Our comprehensive insurance solutions guarantee you your peace of mind. Digital Assets Damage

## What are the most common cyber threats?

### Phishing

any member of your corporation can receive an email with harmful information.

### Denial of Service

your systems can be totally blocked.

### Data Breach

organizations that handle personal data can be seriously affected.

### Malware

might damage your systems.

All of the mentioned above destructive activities might lead to an interruption of your business, significant financial losses, lawsuits, data theft and more. Not to mention the repercussions for your brand's reputation.

## Who are the cyber criminals?

They can be insiders, competitors, disappointed clients, spies, and terrorists. Of course, they can be just cruel strangers trying to steal from your company. The most worrying factor is that anybody with bad intentions can compromise your data or become a hacker. No special skills and sophistication are needed.

## How do we help?

We perform a thorough penetration test planned particularly for your company after researching your business niche.

We have a powerful risk mitigation tool – our in-house Security Operation Center.

We design a full-suite personalized insurance package integrating specific Managed Security Services (MSS) according to your company's needs.

## Our integrated Managed Security Services (MSS)

**SafeNet** – Safe Net is content control and malware protection for business. This cloud based web filtering service enables you to monitor, control and protect your business and users from online threats. It allows you to create a granular policy for your users to control Internet access and block malicious domains from being opened in your organization.

**SIEM** – Security Information and Event Management. This service is designed to provide security teams with centralized visibility into enterprise-wide security data and actionable insights into the highest priority threats.

**EDR** – Endpoint Threat Detection and Response service provides powerful security with comprehensive visibility across all endpoints on the corporate network together, with superior defenses, enabling the automation of routine tasks to discover, prioritize, investigate and neutralize complex threats and APT- like attacks.

**SafeMail** – A full-service cloud based email filtering service which protects your business, your employees, and your clients. The private-cloud solution that can be set up in the cloud or in your own datacentre is extraordinarily simple to manage, and provides 99.97% spam detection, virus and malware blocking, authentication control, outbound scanning as well as robust reporting structures.

**EP** - Managed Endpoint Protection, a complete malware protection and remediation solution with predictive threat detection, proactive threat blocking and integrated end-to-end protection.

### Rest Assured

Your peace of mind is our highest priority. Your fully protected business is our success. Therefore, we respect your privacy and we guarantee you absolute confidentiality.
